An semper in cuiusq; febris decursu evacuandi necessitas, et opportunitas?

Ut morborum periculosissimi esse solent, qui arcem caloris et spiritus munitissimam cor obsidentes, vitam de præsidio et statione dimovere conantur: sic febris toti corpori communis, et omnibus maxime vulgaris et popularis morbus, [illegible] nullo tempore, nulloq; loco excludatur [illegible] salutem et perniciem via. [illegible] cerebro, pulmone, ventriculo, iecore, mesenterio, liene, vel qualibet alia parte [illegible] essentiam habet a corde, [illegible] corporis partibus. [illegible] ad dolores hypocondriorum [illegible] stranguria, [illegible] apoplexias [illegible] convulsiones [illegible] a multitudine [illegible] ad singultus [illegible] ad melancholias, ad [illegible] ad manias [illegible] solutionem.

Febrem demonstrant calor [illegible] per universum corpus diffusus, spiritus et humorum [illegible], multitudo [illegible] gravans, [illegible] sanguinis [illegible] putredinis in sanguine [illegible] cruditas, corporis ad patiendum habilitas, [illegible] cardiogmos, nausea, sitis, [illegible] tussis [illegible] bulimus, [illegible] pro febris conditione pituitosas, biliosas, varias, nigras deiectiones, [illegible] in pituitosa albas [illegible] melancholica albas et nigras criticas, biliosa flavas et tenues: in sanguinea subrubras, [illegible] ad coctionem apparentes, pulsus magnus, [illegible] in putridis vero quando contrahuntur, [illegible] dolor qui a sola intemperie excitari potest, rigor qui paroxysmorum [illegible] causam solum, [illegible] phantasias et memorias oblæsione [illegible] excipiatur, horror qui a sudore periculosus, [illegible] delirium, vigilia, coma, [illegible]. [illegible] lassitudo sponte [illegible] oscitatio.

Febris autem recta curatio [illegible] ἐνδείξεις καὶ ἀντενδείξεις progressa [illegible] morborum occultorum [illegible] nutricationis, [illegible] frigidus febricitantibus omnibus confert. [illegible] paroxysmorum [illegible] a bile, fame, et humorum corruptione, [illegible] paucior, [illegible] frigidæ potus in febribus a sanguine multo et tenui [illegible], in [illegible] aqua hordei cum radice aut semine foeniculi in febribus a multo sanguine et crasso prodest, pituitosis vel melancholicis vini potus est utilior. [illegible] hic initio paroxysmorum [illegible] labor [illegible] corporis motus, [illegible] offendunt.

Earum vero curatio [illegible] perficitur novatione, et evacuatione. [illegible] ad rigores et horrores [illegible] sentina corporis [illegible] clysteribus [illegible] in phlegmasia febris, aut accessu paroxysmi, [illegible] concoctio, quæ cum putredine coniuncta est, [illegible] ad crisis tempus et speciem apparentibus [illegible] cathartices [illegible] febre. [illegible] oblata diluenda est, a qua [illegible] abstinendum, [illegible] purgatio, nisi [illegible] sitis.

Quod si in phlegmasia febris, accessu paroxysmi, [illegible] ad famem, [illegible] tormina, [illegible] in morbis, [illegible] antiquitas, [illegible] in morbis a calidis et tenuibus humoribus [illegible] cholera.

Non igitur semper in cuiusq; febris decursu evacuandi necessitas et opportunitas.

Ponebat Germanus Courtin anno. 1575.
